

# Perspectico

**For Campuses:** By creating the standard profile of every student and then placing them on a multidimensional plane where they are assessed on certain parameters, we offer the colleges a way of figuring out and ranking the potential for each of their students and then match it with the requirements of the recruiters.

We offer Easy Data Management, Seamless Categorization, the option to Invite External Recruiters, Placement Analytics, Report Generation, etc

**For Students:** Perspectico AI offers you a platform where you can not only look for jobs but also get yourself assessed with respect to your dream job and then get trained so as to fill that job role perfectly.

We offer the platform where you can keep a track of your jobs, where you can be made aware of where you stand, where relevant preparations to improve your score are made available, and where you can be noticed by external recruiters.

**For Recruiters:** Perspectico AI hugely reduces the time, energy and money spent in assessing and filtering candidates amidst multitudes of options.

We offer the place to source all applications from different platforms, access to colleges at a click, to see scored and curated candidates, and you can even drill down to what you want to assess.
